Fayraska, cudurka iyo sida loo kala qaado

Covid-19 waxaa keena fayraska SARS-CoV-2, oo loo yaqaanno fayraska koroona. Fayrasku wuxuu infakshan halistiisu kala duwan tahay ku dhalin karaa hawo mareennada. Waxaana sida caadiga ah lagu kala qaadaa dhibcaha. Qofka cudurka qaba ayaa sii daaya fayraska oo dhibco yaryar ah kuwaas oo uu ka sii daayo sanko ama afka marka uu hadlayo, qufaco ama hindhiso – dhibcahaas ayaa gaara gudaha indhaha, sanko ama afka qof kale. Waxaa kale oo cudurka la qaadi karaa haddii uu fayraska gacmaha qofka ka soo raaco shay uu qof kale taabtay oo fayrasku gaaray kaddib na gacmuhu gaarsiiyaan gudaha indhaha, sanko ama afka (cudur laga qaaday meel la taabtay).

Shummiska ayaa lagu kala qaadi karaa fayraska koroona. Ilaa hadda lama oga in fayraska koroona galmada lagu kala qaadi karo. Qofku cudurka wuu qabi karaa, oo dadka kale waa u gudbin karaa ayada oo aysan wax calaamado ah ka muuqan.

Fayrasku uma adkaysan karo saabbuunta iyo biyaha – sidoo kale uma adkaysan karo in aalkolo lagu nadiifiyo iyo heerkulka ka sarreeya 60°C ka sarreeya midna. Si mararka kale ka degdeg badan ayuuna fayrasku dibedda ugu dhintaa.
